

VHF BEAM POWER AMPLIFIER

GENERAL DATA

Electrical:

Filament, Coated:

Voltage	$6.3 \pm 10\%$	ac or dc volts
Current	0.65	amp
Heating Time	Less than 2 seconds	

Transconductance, for plate volts =
 500, grid-No.2 volts = 200 and plate
 ma. = 16 3200 μ hos

Mu-Factor, Grid No.2 to Grid No.1
 for plate volts and grid-No.2 volts =
 200, and plate ma. = 16 7.5

Direct Interelectrode Capacitances:^o

Grid No.1 to Plate	0.11 max.	μ uf
Input	8.5	μ uf
Output	6.5	μ uf

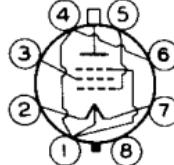

^o With no external shielding, and with base sleeve connected to ground.

Mechanical:

Mounting Position	Vertical, or horizontal with plane of pins 3 and 7 vertical
Maximum Overall Length	3-21/32"
Seated Length	2-15/16 \pm 5/32"
Maximum Diameter	1-5/16"
Bulb	T-9
Cap.	Small
Base	Small-Micanol-Wafer Octal 8-Pin, with Sleeve No.R6159

Basing Designation for BOTTOM VIEW 7CL

Pin 1-Grid No.3,

Max.-Signal Power Output (Approx.). .	42	54	watts

▲ Subscript 2 indicates that grid-No.1 current flows during some part of input cycle.

§ Averaged over any audio-frequency cycle of sine-wave form.

◆ Driver stage should be capable of supplying the specified driving power at low distortion to the No.1 grids of the AB₂ stage. The effective resistance per grid-No.1 circuit of the AB₂ stage should be held at low value.

● The type of input-coupling network used should not introduce too much resistance in the grid-No.1 circuit. Transformer or impedance coupling devices are recommended. When grid No.1 is operated in the negative region with fixed bias, the dc grid-No.1-circuit resistance should not exceed 100000 ohms. For higher values of dc grid-No.1-circuit resistance, cathode bias is required. Under no circumstances should the total dc grid-No.1-circuit resistance exceed 0.5 megohm.

2E24

2E24

VHF BEAM POWER AMPLIFIER

- * When grid No.1 is driven positive and the 2E24 is operated at maximum ratings, the total dc grid-No.1-circuit resistance should not exceed 30000 ohms. If additional bias is required, it must be supplied by a cathode resistor or fixed supply. For operation at less than maximum ratings, the dc grid-No.1-circuit resistance may be as high as 100000 ohms.
- ④ Obtained preferably from a separate source, or from the plate-supply voltage with a voltage divider, or through a series resistor of the value shown. The grid-No.2 voltage must not exceed 600 volts under key-up conditions.
- Obtained from fixed supply or by grid-No.1 resistor of value shown.

Data on operating frequencies for the 2E24 are given on the sheet TRANS. TUBE RATINGS vs FREQUENCY

OUTLINE DIMENSIONS
for the 2E24 are the same as those for the 2E26

OPERATING NOTES

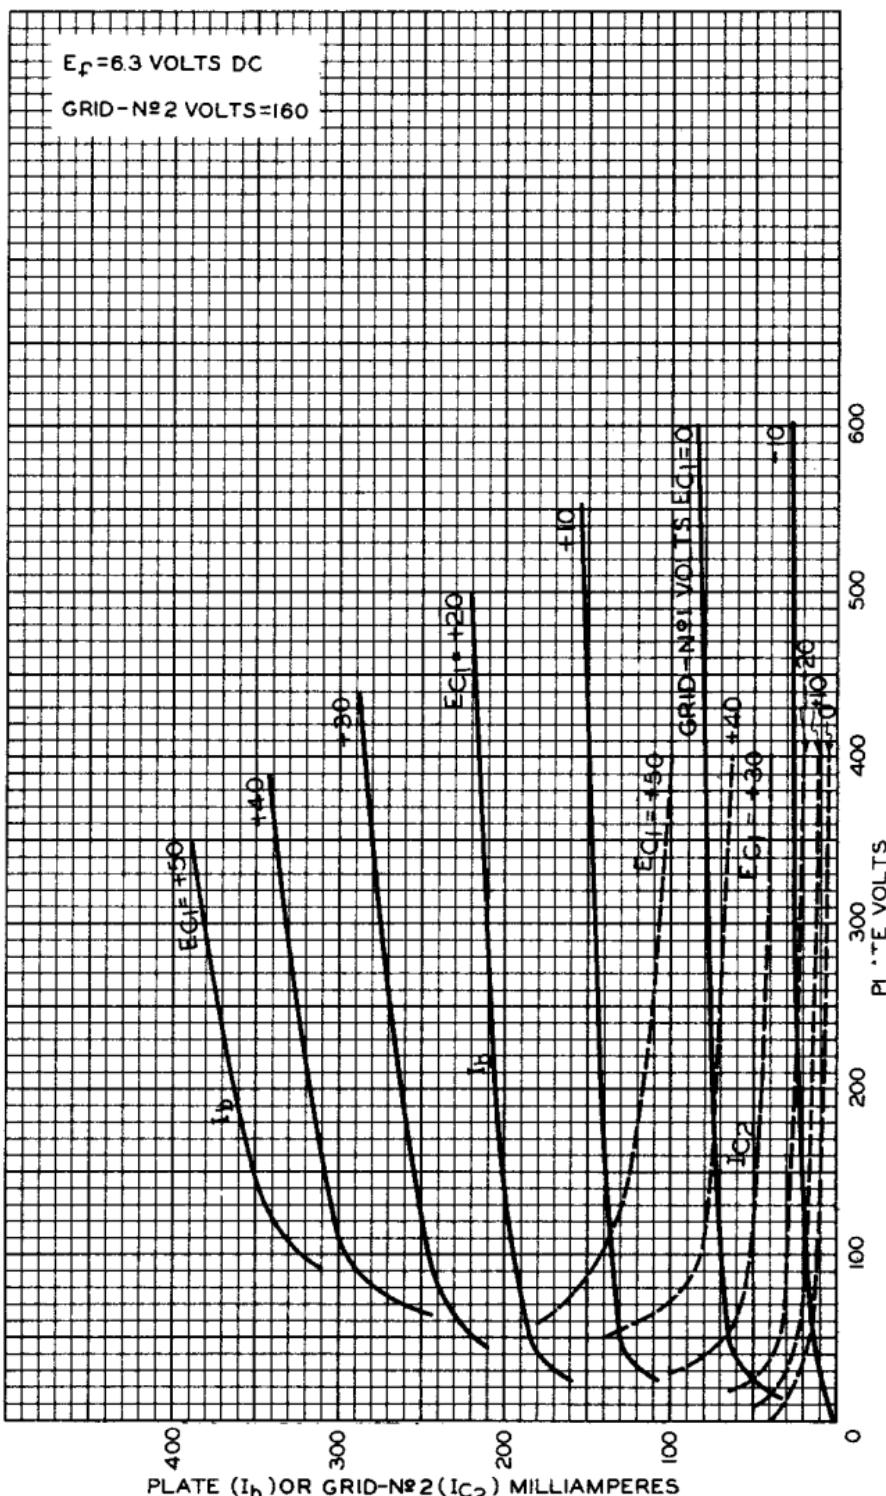

The 2E24 is intended for use in mobile and emergency-communications equipment. Its filament combines sturdiness and efficiency with quick heating and provides wide latitude in operating-voltage range. Although designed for intermittent operation, the filament will give reasonable life when it is operated continuously. In continuous-service applications where extremely long life is desired, it is recommended that the heater-cathode type 2E26 be used.
