

# The National Valve Museum

---

The last couple of months have seen a reorganisation of the magazines held. All the different boxes have been collected together and the magazines are now filed in a single date order. This has revealed all of the duplicates. The best copies have been retained and the spare copies are for sale. A list should appear to friends soon.

We will be at the Audio Jumble in Tonbridge on Sunday October 5. On the table will be the spare Wireless World magazines, a large silica valve and quite a few audio valves complete with UTracer plots. A complete Quad 33, 303 and FM3 system is also for sale together with a few odds and ends.

## Updates September 2014

Exhibits as of 30/07/14 = 3790 now 3797. Three oscilloscope CRT's are in the new valves this month as is the Ferranti HL10 EHT triode. The latter seems to work well at 300 Volts and positive grid bias.

Article art-172 on the uTracer is now complete with sample plots. Also a few of the valves have actual plots attached. ECC83 and KT61 in particular.
