

The National Valve Museum

Updates April 2015

New exhibits this month come mainly from a donation by the Communications & Electronics Museum Trust. The box image pictured on VT-116 was supplied by Stig Comstedt.

Added article art-191 on generating high HT voltages from standard transformers.

Added 40 pro-forma entries and .PDF data-sheets for CV1191 – CV1299 and made additions to dates and equivalents where new data was available. Also I have modified the exhibit software to include a cross reference, from the existing commercial valve exhibits, to the pro-forma CV entries that contain the CV .PDF. These are added manually and will be removed when an actual CV exhibit is available. I have worked through all 475 pro-forma entries and for 151 entries and their associated exhibits I have made changes.

Added another 50 exhibits to take the total from 4103 to 4153.
