

The National Valve Museum

Updates August 2018

The top level indexes have hitherto been manually edited. To insert a new item has involved a time consuming process of moving the dividing spaces and/or row boundaries. Finally I have written the software to automate the reformatting process.

Having acquired 12 issues of the 1920s The Wireless Constructor a new reference index has been made and also a start on reading and extracting suitable material.

Added the start of a new collection
Donation by Roy Marsh

Added 20 new exhibits

Added 2 articles
art-237 – Dynamic mutual conductance tester built
